

Scale the CMS Mountain with the Right MIR Tools

CMS requirements can seem like an insurmountable mountain when submitting claims on your own. But with FS Claim Solutions' Mandatory Insurer Reporting (MIR) services on your side, you'll end up on top.

At FS Claim Solutions, we've stayed on the cutting edge of data technology development since MIR became law. We've developed a technology system that duplicates CMS errors before reporting—preventing costly penalties. Our MIR system also contains a robust Medicare query process to identify potential missed Medicare opportunities.

FS Claim Solutions' MIR services provide an advanced technology platform that uses the latest validation features and security to ensure accurate information is delivered to CMS. Our system provides preemptive alerts so your front-line adjusters can address errors immediately—before sending the information to CMS.

As one of the largest providers of MIR services, we have thousands of RRE clients and process millions of records each month. With our technology and expertise, you won't have to worry about whether you've got the right support for your business.
